

Dear David

As a long time user of AutoCAD (3D) and recent user of SmartLister I have one but strong and based on experience opinion.

The program is not only a time saver (depends on how big and complicated project is) but make my work pleasant again. Any changes during the project I've been working recently on (high end residential interior)

had been made with minimum effort. My work most of the time can be oriented towards modeling, design and engineering.

Without STRETCH or SHRINK my project could take twice as much time than it has been.

On top of that Part List alone is something I used to hate to produce (timely labor without guarantee of making

a human error). Now with SmartLister in hand it is a matter of few minutes to have printed Part List of any units in the project with 100% guarantee there is no mistake !

SmartLister improved my efficiency of completing the whole package of shop drawings by average of 30-40%.

In conclusion:

1. Any person who draws in 3D format using AutoCAD have to find it as the most useful tool in completing shop drawings.
2. Using SmartLister is pleasant and makes your work fun again.
3. Eliminating human errors within Part List is priceless !
